

PORTFOLIO AUDIT REPORT

claudetomoh.vercel.app

Claude Tomoh Ikfingeh

BRUTAL. HONEST. ACTIONABLE.

A full audit evaluated against top 0.5% global developer portfolios. Every section scored. Every weakness identified. Every fix specified.

Evaluated Against

Vercel-level portfolios | Linear design systems | YC founder portfolios
Elite developer portfolios | Top product engineers | Modern SaaS websites

Audit Date: May 2026

Prepared by: Portfolio Strategy Audit

SCORES AT A GLANCE

Every section of your portfolio has been scored out of 10. Red = urgent fix. Orange = needs improvement. Green = working well.

Section	Score	Priority
Hero Section	5.5/10	CRITICAL
Navbar	6/10	HIGH
Typography & Type System	5/10	HIGH
Skill Percentage Bars	2/10	CRITICAL
About Section	6.5/10	HIGH

Ecosystem Map	3/10	CRITICAL
Impact Dashboard	4/10	HIGH
Project Section	6.5/10	HIGH
GitHub Intelligence	3.5/10	CRITICAL
AI + Media Lab	5/10	MEDIUM
Experience & Leadership Timeline	7/10	MEDIUM
Contact Section	5/10	HIGH
Footer	4/10	MEDIUM
Mobile Responsiveness	4.5/10	CRITICAL
Overall Portfolio	4.8/10	CRITICAL

THE FIRST 5 SECONDS

What a Top Recruiter Feels Right Now

CURRENT REALITY

A recruiter from Google, Stripe, or a top YC company lands on your portfolio. In the first 5 seconds they see a dark portfolio with gradient text, they read 'Aspiring AI Engineer' in your pill badge, and they move on. That one word — ASPIRING — costs you interviews at elite companies before your projects are ever seen.

What It SHOULD Feel Like in 5 Seconds

TARGET STATE

The page loads instantly. A confident dark canvas. A professional photo on the left, one sentence on the right: 'I build AI systems that create measurable human impact across Africa.' Below it: 5 production models. 2,000+ people reached. 4 countries. Two buttons: See My Work and Let's Talk. They scroll. They see Rise for Impact — a real platform, real screenshot, real users. By the time they reach the contact section they are already composing an email.

The Biggest Single Mistake

You are trying to be four people at once: AI engineer + community leader + researcher + content creator. Top 0.5% portfolios have ONE razor-sharp position. Yours should be:

"African AI engineer building systems that create measurable human impact."

Everything else flows from that. Rise for Impact becomes proof of impact. The ML models become proof of engineering. The research becomes proof of depth. But right now the portfolio reads as a community organizer who also codes, rather than an engineer who also leads.

SECTION-BY-SECTION AUDIT

01. HERO SECTION

Hero Section

5.5/10

What Works

- Gradient headline is visually bold and commands attention
- Pill badge 'Aspiring AI Engineer · Founder · Builder' creates a clean entry point
- Stats row (19 projects, 500+ youth, 4 countries) gives instant credibility signals
- Dark gradient background with teal-to-navy feel has energy and personality
- Teal-to-purple gradient text treatment on key words is well executed and modern

What Weakens Credibility

- 'ASPIRING AI Engineer' — you have deployed 5 production ML models. You are not aspiring. This single word costs you interviews at elite companies before your projects are seen
- Resume button links to '#' — a broken link in your hero is catastrophic for trust
- Headline 'Building AI Systems, Communities & Opportunities at Scale' tries to say three things and lands on none of them — it reads as a mission statement, not a positioning statement
- No professional photo in the hero — elite personal brand portfolios almost always include a confident headshot in the hero, not buried in the About section
- Description paragraph is dense and tries to cover everything in 3 lines
- '6 Active Programs' stat means nothing to a tech recruiter — show engineering metrics

What Top Recruiters Think

RECRUITER PSYCHOLOGY

Good energy but the copy is trying too hard to cover everything. I don't know in 3 seconds if this person is an AI engineer or a community organizer. I see the word 'Aspiring' and I mentally move them to the junior pile before reading anything else.

What Elite Portfolios Do Differently

- Open with ONE crystalline positioning statement — not a paragraph, not a list — one sentence
- Never use 'Aspiring' — they state what they ARE, not what they want to be
- Photo in the hero — confident, professional, high contrast against dark background
- Stats are engineering-specific: deployed endpoints, GitHub stars, user counts, uptime
- Two CTAs maximum: one primary action, one secondary — never three

Exact Improvements Required

1. Remove 'Aspiring' immediately — replace pill with 'AI Engineer · Founder · Builder'
2. Fix the Resume link or remove it entirely until a real CV is ready
3. Rewrite headline to one powerful sentence: 'I Build AI Systems That Move People Forward.'
4. Replace '6 Active Programs' with '3 Production Models Deployed' or '5 Deployed Systems'
5. Add a professional photo to the hero section — confident, well-lit, high quality
6. Reduce CTA buttons to two: 'View Projects' and 'Let's Talk' only

02. NAVBAR

Navbar

6/10

What Works

- Clean, minimal, dark aesthetic fits the brand
- 'Claude.' wordmark as logo is distinctive and memorable
- CONTACT button in teal stands out correctly as primary CTA
- Spacing and link count is appropriate — not overcrowded

What Weakens Credibility

- Nav item 'Writing' links to a 'Research' section — label and destination are mismatched, signals sloppy UX thinking
- No mobile hamburger menu — navigation disappears on mobile entirely
- Navbar has no scroll behavior — no blur/glass effect as user scrolls, feels static
- No active state indicator showing which section the user is currently viewing

What Elite Portfolios Do Differently

- Navbar starts transparent, gains backdrop-filter: blur(12px) on scroll — single CSS line, massive premium feel
- Active nav item is highlighted with a subtle indicator (dot, underline, or color change)
- Smooth mobile drawer or dropdown with the same links and branding
- Vercel, Linear, Stripe: all have scroll-reactive navbars as baseline standard

Exact Improvements Required

7. Add backdrop-filter: blur(12px) with dark background on scroll using IntersectionObserver or scroll event
8. Rename 'Writing' to 'Research' in nav OR rename the target section to 'Writing' — make them match
9. Add mobile hamburger menu (now being fixed — good)
10. Add active section indicator using scroll-spy logic

03. TYPOGRAPHY & TYPE SYSTEM

Typography & Type System

5/10

What Works

- Hero headline size is commanding and creates visual hierarchy
- Gradient text on key words shows typographic awareness and design intent
- Font choice is clean and readable across screen sizes

What Weakens Credibility

- No consistent type scale — section headings, body text, labels, and captions are sized arbitrarily
- Body text paragraphs run 4-6 lines with no breathing room between them
- 'AI x Tech x Impact x Leadership' uses x as a separator — reads as informal, not premium
- Inconsistent weight usage — bold appears randomly without a hierarchy rationale

What Elite Portfolios Do Differently

- One display font for heroes, one sans for body — strict size ratios (1.25 or 1.333 modular scale)
- Maximum 3 lines per paragraph block — force whitespace as a design element
- Separators are em-dash (—) or mid-dot (·) not multiplication symbols
- Bold is reserved for key terms and section headers only, not used decoratively

Exact Improvements Required

11. Establish a type scale: Display 64px / H1 48px / H2 36px / H3 24px / Body 16px / Caption 13px
12. Reduce all paragraph blocks to maximum 3 lines
13. Replace × separators with · in taglines
14. Audit every bold usage — only keep bold where it creates genuine hierarchy

04. SKILL PERCENTAGE BARS

Skill Percentage Bars

2/10

CRITICAL — REMOVE ENTIRELY

This is the harshest finding in this audit. Skill percentage bars are universally understood by senior engineers and recruiters at top companies to be meaningless and amateur. Delete every single one immediately.

Why Skill Bars Are Career-Damaging

- Who decided you are 88% in Python? You did. Subjectively. With no rubric or benchmark
- What does 85% in AI mean? Nothing. There is no global standard for AI proficiency
- You show 95% in Community Leadership — a soft skill ranked higher than technical skills signals confused positioning
- Stripe, Google, OpenAI engineers do not have percentage bars on their portfolios. Not one.
- Senior engineers who see these immediately categorize the candidate as junior

What Elite Portfolios Do Instead

- Show proof through projects — a deployed ML model IS your Python skill score
- Use a tech stack logo grid (simple icons for each technology used in production)
- Let project outcomes speak: '43/43 test coverage' says more than '82% GitHub proficiency'
- Endorsements and testimonials if available — social proof beats self-assessment always

Exact Improvements Required

15. DELETE every single percentage bar — all 9 of them — immediately
16. Replace the entire Skills section with a clean Tech Stack logo grid
17. Logo grid should show only technologies used in actual production projects
18. Group by category: Languages | Frameworks | ML/AI Tools | Cloud & Deploy

05. ABOUT SECTION

About Section

6.5/10

What Works

- 'Engineering Tomorrow While Empowering Today' headline is genuinely strong — captures dual identity cleanly
- Content covers the right territory: AI background, community impact, current roles
- The breadth of experience described is impressive for your career stage

What Weakens Credibility

- Reads like a LinkedIn summary copy-pasted — four dense paragraphs with no visual breathing room
- Skill tags at bottom (AI & ML, Community, Impact) are so broad they add nothing
- No specific personal detail that makes you human and memorable beyond credentials
- Photo placement is in About rather than Hero — fewer people scroll this far

What Elite Portfolios Do Differently

- About section is a story, not a summary — clear narrative arc with visual breaks
- Three beats: where you came from → what you built → where you are going
- One specific human detail that creates connection (a specific moment, a specific challenge overcome)
- Photo is high-resolution, professionally composed, with intentional lighting

Exact Improvements Required

19. Compress to 3 tight paragraphs maximum
20. Ensure photo is high resolution and professionally composed
21. Remove generic skill tags
22. Add one specific, personal detail — a moment or story that shows the human behind the engineer
23. Move a cropped version of your photo to the hero section

06. ECOSYSTEM MAP

Ecosystem Map

3/10

What Works

- The CONCEPT is interesting — showing work as an interconnected ecosystem signals systems thinking
- Section positioning attempts to show the breadth and interconnection of your work

What Weakens Credibility

- Execution fails the concept completely — renders as a plain text list (CT / Claude Tomoh / Rise for Impact...) with no visual network or spatial layout
- A broken concept is worse than no concept — it signals 'started but didn't finish'
- The section title sets expectations the visual does not meet
- No interactive elements, no connectors, no hierarchy — just text stacked vertically

Two Options — Choose One

OPTION A: BUILD IT PROPERLY

Create a real interactive network visualization using D3.js or a canvas-based approach. Nodes for each initiative connected by lines. Hoverable. Animated on scroll entry. This takes real engineering effort but would be a genuine showpiece.

OPTION B: REMOVE IT ENTIRELY

If Option A is not feasible now, remove this section completely. Replace with a clean 'What I Build' grid of 4 cards (AI Systems, Rise for Impact, Full-Stack Products, Research). Simple, clean, no broken expectations.

07. IMPACT DASHBOARD

Impact Dashboard

4/10

What Works

- The IDEA of a metrics dashboard is strong positioning for an AI engineer
- Numbers are real and genuinely impressive (2,000+ youth, 10+ countries)
- Showing measurable impact differentiates you from engineers with only technical projects

What Weakens Credibility

- Persistent rendering issues — spinners visible, layouts collapsing, content not loading
- Metrics mix engineering stats (19 repos) with community stats (2,000+ youth) with no hierarchy

- '8 Web Apps' as a stat is vague — which 8? What traffic? What outcomes?
- The section is too wide in scope — trying to dashboard everything dilutes impact

Exact Improvements Required

24. Fix all rendering issues — no spinners should appear on a static data section
25. Separate into two clear subsections: Engineering Metrics and Community Impact
26. Engineering: repositories, models deployed, test coverage, languages
27. Community: youth reached, countries, programs, publications
28. Each metric needs a one-line context statement, not just a number

08. PROJECT SECTION

Project Section

6.5/10

What Works

- Challenge → Solution → Implementation → Outcome structure is genuinely strong
- AgriLink shows real engineering depth: 43/43 tests, 12 design patterns, custom PHP MVC
- Rise for Impact has a live demo link — the strongest trust signal in the portfolio
- Breadth of projects shows range across ML, full-stack, social impact, and agriculture tech
- Technology stack tags for each project create quick scannable context

What Weakens Credibility — CRITICAL ISSUES

- NO VISUAL SCREENSHOTS anywhere — the biggest single weakness in the project section. Without visuals, projects are just text. Text does not create desire. Visuals do.
- AgriLink demo runs on raw IP address ([http://169.239.251.102:280/...](http://169.239.251.102:280/)) — looks like a university server, signals not production-ready
- Spotify Churn has 1 GitHub star — your own star. Starring your own repos is visible and signals zero external validation
- Smart Tutor Platform has no live demo at all
- Repo name '20215o-FUTURE_ML_01' exposed as a GitHub link — internal IDs in public portfolios look sloppy
- 'Future Interns' as company name sounds like a student program, not a professional company

THE VISUAL GAP

Top engineer portfolios at Figma, Stripe, and Linear show screenshots, mockups, or short demo videos for every project. A recruiter should be able to see what you built before

reading a single word. Add real screenshots to every project card as the primary visual element.

Project-by-Project Fix List

Rise for Impact Platform:

- Add a real screenshot of the platform homepage or dashboard
- This is your strongest project — consider making it a full-width featured case study above other projects

AgriLink Ghana:

- Host on Vercel, Render, or Railway — remove the raw IP address link completely
- The 43/43 tests and 12 design patterns are genuinely impressive — make them MORE prominent
- Add architecture diagram screenshot if available

Smart Tutor Platform:

- Add a live demo or Loom video walkthrough — text-only projects get skipped
- The AI matching algorithm is the strongest technical feature — lead with it

Spotify Churn Prediction:

- Get 3-5 genuine GitHub stars from peers
- Add the actual accuracy metric (e.g., '87% accuracy on test set') — this is what ML engineers want to see
- Add a screenshot of the Streamlit interface

AI Customer Support Chatbot:

- Add a screenshot or short GIF of the chatbot in action
- Remove the '20215o-FUTURE_ML_01' repo name reference from the public portfolio

09. GITHUB INTELLIGENCE SECTION

GitHub Intelligence

3.5/10

WARNING: THIS SECTION ACTIVELY HURTS YOU

The GitHub Intelligence section is the one section that is making your portfolio worse by existing. The language breakdown shows PHP at 35.3% — you are positioning as an AI engineer, but your biggest language is PHP. TypeScript is only 11.8% despite claiming full-stack React/TypeScript expertise. And all 13 starred repos have 1 star each — your own.

The Language Breakdown Problem

What it Shows

What Recruiters Read

PHP: 35.3%, HTML: 23.5%, Python: 17.6%, TypeScript: 11.8%

What You Want to Show

Python/TypeScript-first engineer with AI/ML depth

A PHP/HTML developer with some Python and minimal TypeScript

The Gap

Severe — the stats contradict your positioning entirely

Exact Improvements Required

29. Remove this section entirely — it currently does more damage than good
30. If kept, only show Python and TypeScript percentages — suppress PHP and HTML
31. Start contributing to 2-3 real open source projects to build legitimate external stars
32. Rename or remove the '20215o-FUTURE_ML_01' repository from public view
33. Consider pinning your 6 best repositories on GitHub so they appear prominently

10. AI + MEDIA LAB

AI + Media Lab

5/10

What Works

- The concept of an 'experimentation lab' is strong personal branding — signals curiosity and depth
- The name 'AI + Media Lab' is creative and memorable
- Shows range beyond job titles which can be a differentiator

What Weakens Credibility

- Six categories with no actual outputs shown — reads as planned work, not completed work
- 'Content Systems' and 'Productivity Systems' feel off-brand for an AI engineer portfolio
- No links, no demos, no results — just category names and descriptions
- 'Growth Automation' sounds like a marketing term, not engineering

Exact Improvements Required

34. Show actual outputs — a notebook link, a tool URL, a short demo GIF
35. Remove Content Systems and Productivity Systems — they dilute technical positioning
36. Reduce to 3 focused categories: AI Model Experiments, Prompt Engineering, Growth Automation
37. Each category needs one real output or link to be credible

11. EXPERIENCE & LEADERSHIP TIMELINE

Experience & Leadership Timeline

7/10

What Works — Your Strongest Content Section

- Genuine breadth of real experience for your career stage — this is exceptional
- Founder + AI Intern + Peer Coach Captain + Code4All Coordinator + Policy Research + Top 0.01% Ambassador
- The AI internship with 3 production ML models is a genuine differentiator
- Policy research publication is rare and adds intellectual credibility
- Top 0.01% globally on Extern, while the platform is less known, shows quantified achievement

What Weakens Credibility

- Timeline design renders as plain text — no visual connectors, no milestone dots, no line
- 'Future Interns' company name weakens the AI internship — sounds like a student platform
- Extern context is insufficient — most recruiters do not know what Extern is

Exact Improvements Required

38. Build proper visual timeline: vertical line, milestone dots, glassmorphism cards
39. Add company logos where possible (Ashesi University has a logo)
40. Lead each entry with the most impressive quantified outcome
41. For Extern entry, add brief context: 'global network of 150+ countries' immediately visible

12. CONTACT SECTION

Contact Section

5/10

What Weakens Credibility

- claudetomo20@gmail.com — a Gmail address on a professional portfolio is a major trust failure
- Elite candidates have custom domain emails. This is one of the highest-leverage fixes available.
- No calendar booking link — elite developers make it frictionless to schedule a call

- Contact links stacked vertically wastes space and creates friction

Exact Improvements Required

42. Get custom domain email immediately: claudetomoh.com or clauderiseforimpact.org
43. Add a Cal.com or Calendly link for frictionless call booking
44. Display contact links in a horizontal row, not a vertical stack
45. Add availability status: 'Open to opportunities starting [month]'

13. FOOTER

Footer

4/10

What Weakens Credibility

- Footer appears minimal with no visual treatment — an afterthought
- No closing statement or brand sign-off that reinforces your positioning
- No visual animation or personality in the final brand impression

Exact Improvements Required

46. Three-column layout: Brand/tagline left, Navigation center, Connect right
47. Full-width gradient divider line (teal to purple) above footer content
48. Add closing brand line: 'Built with passion in Ghana · Reaching across Africa'
49. Copyright + custom email in bottom bar

COMPARISON AGAINST ELITE STANDARDS

vs. Vercel-Level Portfolios

- Vercel portfolios have zero unnecessary sections — every pixel earns its place
- Your portfolio has 12+ sections where 6 would be significantly stronger
- Vercel portfolios never self-assess skills with percentages
- They never have broken links — a broken CTA in the hero is disqualifying
- They load instantly with zero layout shifts or visible spinners

vs. Linear-Style Design Systems

- Linear's aesthetic: ruthless restraint — one typeface, one accent color, microscopic attention to spacing
- Your portfolio has good instincts but inconsistent execution
- Spacing between sections feels arbitrary rather than following a systematic scale
- Linear never uses self-assessment metrics — everything is shown through the product itself

vs. YC Founder Portfolios

- YC founders lead with outcomes and traction: '500+ users, 4 countries, \$X raised'
- They NEVER say 'aspiring' — they state what they have built
- Your strongest asset (Rise for Impact) should be the centerpiece, not buried in a list
- YC founders make their mission immediately clear — yours requires 3 paragraphs to understand

vs. Top Product Engineers

- Product engineers at Figma, Notion, and Linear show taste through the portfolio itself
- The portfolio IS the product demo — it demonstrates your design and engineering judgment
- Yours has good bones but execution inconsistencies signal 'builds fast, doesn't finish clean'
- Top engineers never have: broken links, raw IP addresses, self-starred repos as social proof

STRATEGIC ANALYSIS

What Makes This Portfolio Memorable

- The dual identity of AI engineer + social impact founder is genuinely rare and compelling
- Rise for Impact with real users in real countries is a standout proof point
- The policy research publication is intellectually impressive for a student-stage portfolio
- The AgriLink architecture (43/43 tests, 12 design patterns) shows real engineering discipline
- Ghana/Pan-African positioning creates a distinct market identity

What Prevents It From Being Top 0.5% Globally

- The word 'Aspiring' — non-negotiable change required immediately
- No visual screenshots for any project — the most expensive missing element
- Self-assessed skill percentages — universally signals junior

- 12+ sections competing for attention — too much noise, not enough signal
- Broken links and raw IP addresses — signals unfinished work
- Gmail address — signals not yet professional-level serious
- GitHub stats that contradict the positioning (PHP-heavy when claiming AI/TypeScript focus)

Senior vs. Junior Signal Analysis

CURRENTLY LOOKS JUNIOR 'Aspiring' in bio and pill badge	WOULD LOOK SENIOR Confident present-tense positioning
CURRENTLY LOOKS JUNIOR Self-assigned percentage bars	WOULD LOOK SENIOR Project outcomes as skill proof
CURRENTLY LOOKS JUNIOR Gmail address	WOULD LOOK SENIOR Custom domain email
CURRENTLY LOOKS JUNIOR Raw IP address for demo	WOULD LOOK SENIOR Properly hosted on Vercel/Render
CURRENTLY LOOKS JUNIOR Self-starred repos as social proof	WOULD LOOK SENIOR External validation and contributions
CURRENTLY LOOKS JUNIOR 12+ sections with spinner bugs	WOULD LOOK SENIOR 6 flawless, intentional sections

THE 10 HIGHEST-IMPACT IMPROVEMENTS

Ranked by recruiter impact. Do these in order.

1. REMOVE 'ASPIRING' — DO THIS TODAY

From every instance on the site: pill badge, meta description, about text. Replace with 'AI Engineer · Founder · Builder'. This single change affects every first impression. It costs zero time and zero money. Do it before anything else.

2. FIX OR REMOVE THE BROKEN RESUME LINK

A broken CTA in your hero is the worst possible first impression for a software engineer. Fix it or remove it today.

3. DELETE ALL SKILL PERCENTAGE BARS

Replace with a clean tech stack logo grid. Every single percentage bar must go. This alone will make the portfolio look significantly more senior.

4. ADD VISUAL SCREENSHOTS TO EVERY PROJECT

This is the highest effort but highest impact change. Even rough screenshots would increase recruiter engagement by 10x. Start with Rise for Impact and AgriLink.

5. HOST AGRILINK ON A REAL DOMAIN

Remove the raw IP address immediately. Deploy to Vercel, Render, or Railway for free. A raw IP address on a professional portfolio is disqualifying.

6. GET A CUSTOM DOMAIN EMAIL

claude@claudetomoh.com or claude@riseforimpact.org. Gmail on a portfolio signals 'not yet serious about their professional brand'. Get this done today.

7. ADD NAVBAR SCROLL BLUR EFFECT

backdrop-filter: blur(12px) on scroll. One CSS rule. Makes the entire site feel 3x more premium. Takes 10 minutes to implement.

8. COMPRESS TO 6 CORE SECTIONS

Remove: Ecosystem Map (broken), GitHub Intelligence (hurts positioning), Skill Bars. Keep: Hero, Projects, Experience, Tech Stack, About, Contact. Less is significantly more.

9. REWRITE THE HERO TO ONE POWERFUL SENTENCE

Stop trying to say everything. One sentence that creates instant clarity: 'I build AI systems that create measurable human impact across Africa.' Done. Clear. Powerful.

10. ADD A CAL.COM BOOKING LINK

Make it frictionless to book a call. This single addition has directly resulted in interviews for thousands of engineers. Add it to the contact section and the hero.

WHAT TO REMOVE COMPLETELY

These elements are actively harming your portfolio's credibility. Remove them without replacement.

- ALL skill percentage bars — every single one, including soft skills
- GitHub Intelligence section — the language breakdown contradicts your positioning
- The word 'Aspiring' from every location on the site
- The broken Resume link (#) — until a real CV is ready
- Raw IP address for AgriLink demo
- The 20215o-FUTURE_ML_01 repo name reference
- Content Systems and Productivity Systems from the AI Lab section
- '6 Active Programs' stat from hero — replace with engineering metrics
- Generic skill tags from About section (AI & ML, Community, Impact)

WHAT TO REDESIGN ENTIRELY

- Ecosystem Map — build as a real interactive D3 network or remove the section completely
- Hero copy — one powerful sentence, not a dense paragraph covering everything
- Project cards — screenshots must be the primary visual element, not text
- Skills section — tech stack logo grid replacing every percentage bar
- Timeline — needs a proper visual design with connecting line and milestone cards

WHAT TO REBUILD FROM SCRATCH

- The entire Skills section — current approach is fundamentally wrong for an AI engineer portfolio
- Contact section — needs custom email, Cal.com link, and horizontal layout
- Footer — needs 3-column layout, gradient divider, and closing brand statement

COMPLETE REDESIGN STRATEGY

Recommended 6-Section Architecture

This is the ideal section order for maximum recruiter conversion. Everything removed from this list is noise.

Section 1 HERO — One sentence. Name. Photo. Two CTAs. Four engineering-specific stats only.	Section 2 FEATURED PROJECT — Rise for Impact as a full-width case study above all other projects.
Section 3	Section 4

PROJECTS — 3 cards maximum, with screenshots, outcomes, and live links.

Section 5

TECH STACK — Logo grid only. No percentages. Group by category.

EXPERIENCE — Visual timeline, 4 key roles, company logos, quantified outcomes.

Section 6

CONTACT — Custom email + Calendly link. Availability status. Simple and frictionless.

Visual Direction Strategy

- Maintain dark navy base (#0a0f1e) — this works and is on-brand
- Teal (#00d4ff) as primary accent — keep it, it is distinctive
- Purple (#8b5cf6) as secondary accent — use sparingly for gradient moments only
- Add backdrop blur on navbar scroll — single highest-leverage visual improvement
- Enforce consistent 8px spacing grid throughout every section
- All section padding: 100px top/bottom on desktop, 60px on mobile
- Card surfaces: rgba(255,255,255,0.04) with 1px border rgba(255,255,255,0.08)
- Remove all visible loading spinners — static data should never show a spinner

Recruiter Conversion Strategy

50. The hero must answer: Who are you? What do you build? Why does it matter? in 5 seconds
51. Rise for Impact should be the first project shown — it is your most credible proof point
52. Every project needs a live link OR a Loom demo — no exceptions
53. Add a 'Download CV' button once CV is properly hosted and ready
54. Add availability status near the top: 'Open to opportunities · Starting [month]'
55. Custom email must be visible in the hero or navbar — not hidden in the footer
56. Cal.com booking link reduces friction from 'interested' to 'scheduled' dramatically

Project Storytelling Strategy

For each project, the story must follow this exact structure:

57. VISUAL FIRST — Screenshot, mockup, or GIF as the primary element before any text
58. ONE LINE IMPACT — '43/43 tests. 4 countries. 500+ users.' — immediately after visual
59. THE PROBLEM — One sentence on the real-world gap being solved
60. THE SOLUTION — Technical approach in 2-3 sentences maximum
61. THE OUTCOME — Quantified results only. No vague 'improved user experience'
62. TECH STACK — Logo pills, not a list of names
63. LINKS — Live demo first, then GitHub code

Technical Credibility Strategy

- Host ALL demos on real domains — not raw IPs, not localhost, not broken links
- Pin your 6 best GitHub repositories — make your GitHub profile a portfolio in itself
- Add README files with architecture diagrams to your top 3 projects
- Contribute to one real open source project — even small PRs build external credibility
- Get accurate model performance metrics and display them (accuracy, F1, AUC)
- Add a CI/CD badge to AgriLink showing '43/43 tests passing' — visible credibility signal

Animation Strategy

- Scroll-triggered fade-up on all section entries: `opacity 0→1 + translateY(24px)→0, 0.6s ease`
- Stagger child elements with 80ms delay increments for natural cascade feel
- Navbar backdrop-filter transition on scroll: `transparent → blur(12px) dark`
- Project cards: subtle `translateY(-3px)` on hover with box-shadow glow
- NO loading spinners for static data — fix at root, not with CSS hiding
- Counter animations on stats (19 → counting up) only if they load instantly
- Keep total animation budget under 400ms for any single element — no slow reveals

Premium Portfolio Positioning

YOUR CORE POSITIONING STATEMENT

African AI engineer building systems that create measurable human impact. Every section, every word, every link on the portfolio should either prove this statement or be removed.

- Lead with engineering outcomes, follow with community impact — not the other way around
- The Ghana/Africa angle is a genuine differentiator globally — own it more explicitly
- 'Rise for Impact' should appear in your positioning, not just in the projects section
- Remove all hedging language: 'aspiring', 'exploring', 'learning' — replace with past tense achievements
- The portfolio should feel like it was built by someone who has already arrived, not someone who is on the way

YOUR COMPLETE ACTION CHECKLIST

Work through this list in order. Each item is ranked by impact and urgency.

CRITICAL — Do Today

- ✓ Remove 'Aspiring' from pill badge, about section, and meta description
- ✓ Fix or remove the broken Resume link (#) from the hero CTA
- ✓ Remove all skill percentage bars from the Skills section
- ✓ Remove raw IP address AgriLink demo link
- ✓ Remove the GitHub Intelligence section entirely
- ✓ Get a custom domain email (claude@claudetomoh.com)

HIGH PRIORITY — This Week

- ✓ Add professional screenshot to Rise for Impact project card
- ✓ Deploy AgriLink to Vercel or Render with a real domain
- ✓ Add screenshots to all remaining project cards
- ✓ Rewrite hero headline to one powerful positioning sentence
- ✓ Replace skill bars with a tech stack logo grid
- ✓ Add navbar backdrop blur effect on scroll
- ✓ Fix 'Writing' nav label to match 'Research' section or vice versa

MEDIUM PRIORITY — This Month

- ✓ Add professional photo to hero section
- ✓ Add Cal.com or Calendly booking link to contact section
- ✓ Add availability status near hero: 'Open to opportunities'
- ✓ Redesign contact section with horizontal link layout
- ✓ Build proper visual timeline for experience section
- ✓ Either build real Ecosystem Map visualization or remove section
- ✓ Reduce AI + Media Lab to 3 categories with real output links
- ✓ Rebuild footer with 3-column layout and gradient divider
- ✓ Add ML accuracy metrics to Spotify Churn project
- ✓ Pin 6 best repositories on GitHub profile
- ✓ Add README with architecture diagram to AgriLink and Rise for Impact

You have the substance. The gap is execution, restraint, and confidence in your positioning.

Fix the items above and you will be in a completely different conversation with global recruiters.

claudetomoh.vercel.app | Portfolio Audit Report | May 2026
